

## Illuminating Light at Night

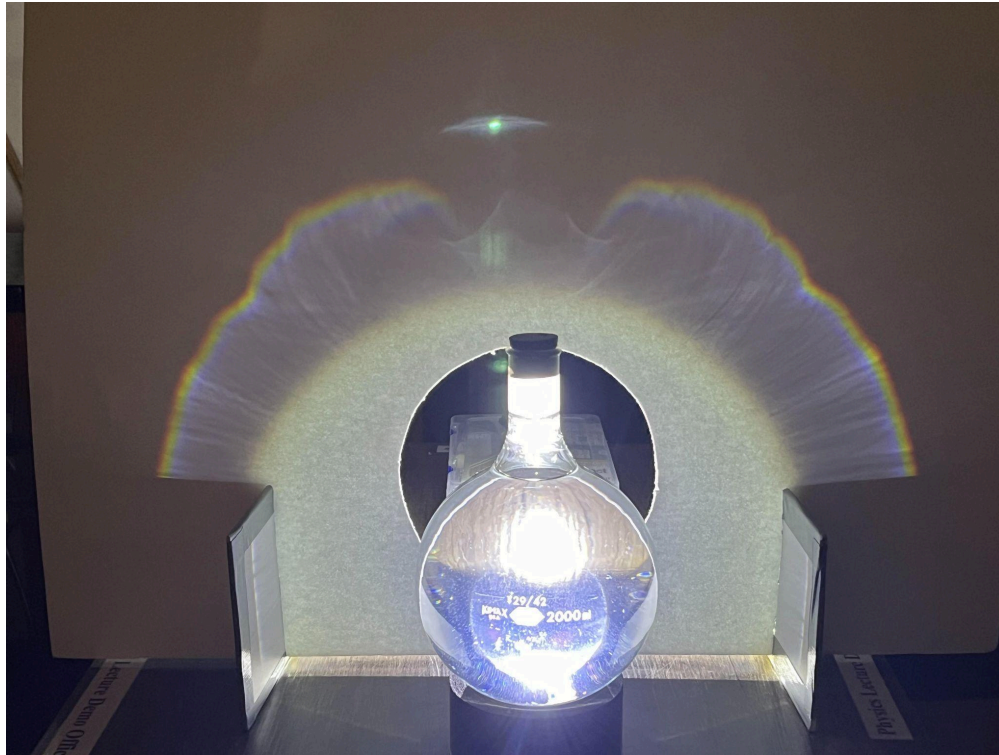

I photographed this sight with the lightpost illuminating the surrounding plants against a beautiful sunset sky background. This image is contained within a JPG file.

## Light Through Peephole

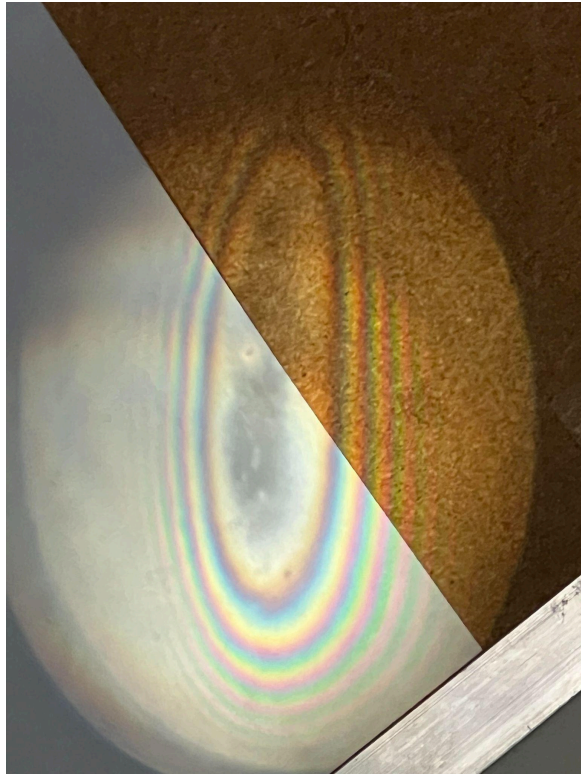

This artwork was created by taking a picture of the morning sun's light passing through a peephole in the door. The refraction of the morning sun's light by the lens of the peephole is what gives an almost ethereal view of the morning sun's light. This image is contained within a JPG file.

## Rainbow Light Splash

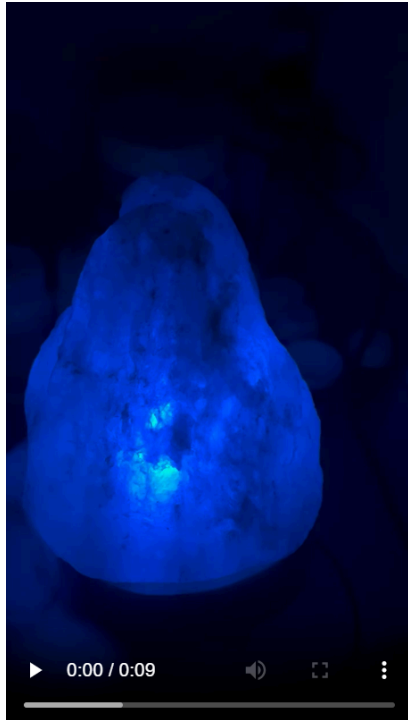

This spectacular sight is created by using a flashlight to shine in the circular beaker with water through a circular hole in the white cardboard and using the white cardboard to help show the spreading rainbow light reflected off from the beaker. This image is contained within a JPG file.

## Rainbow Ripple

I used a special prism to reflect the light to display a rainbow ripple on the wall. One can see clearly in this image the circular series of rainbow rings emerging from the center point of this reflected light. It's almost hypnotic seeing it if it wasn't a static image file, but it still is. This image is contained within a PNG file.

## Illuminating Rock Lamp

I built a rock lamp that can glow a unique ethereal blue glow when turned on in a completely dark room. This blue glow is reminiscent of the serene glow of the ocean underwater and to Earth's atmosphere when viewed from outer space. This artwork is shown in a MP4 video file.
